Creating a user journey is a quick way to help you and your team gain a deeper understanding of who you're designing for, aka the stakeholder in your project. The information you add here should be representative of the observations and research you've done about your users.  $\wp$ 

Phases gh-level steps your user needs to complish from start to finish	Information gathering	leaf collection	field inspection	protective treatments
Steps etailed actions your user has to	soil climate seasonal condition crop	Best price Upload image of the leaf	Check for unwanted infection Check for unwanted infection	add recommended fertilizer for crop diseases
Feelings  That your user might be thinking and eeling at the moment	reduce   quality   fertilizer   on   demand	Good quality of leaf	if feild is great then yield will be good	prevent the fungus and weeds
	unpredictable climatic condition	Complex to use	their should not be parasitic diseases	dis-satisfied by the service
